

1. Authentication & Session Management

Handles login, signup, and OTP verification for Suppliers.

Method	Endpoint	Description
POST	/auth/register	Supplier sign-up (creates user with role EQUIPMENT_OWNER).
POST	/auth/login	Login via email/phone and password.
POST	/auth/otp/send	Sends 6-digit OTP to the supplied phone number (WhatsApp/SMS).
POST	/auth/otp/verify	Verifies OTP during onboarding step 1.
GET	/auth/me	Fetches the currently logged-in supplier's profile & status.
POST	/auth/logout	Invalidates the current session/token.

2. Supplier Onboarding (Steps 2–5)

Manages profile completion, location, document uploads, and submission for verification.

Method	Endpoint	Description
PATCH	/suppliers/profile	Update company name, business phone, and email.
POST	/suppliers/documents	Upload CAC certificate / Proof of Purchase (returns a file URL).
PUT	suppliers/location	Save Primary Base City, Yard Address, and precise GPS coordinates.
POST	/suppliers/submit	Finalizes onboarding and triggers the "Pending Verification" status.
GET	suppliers/status	Returns verification status (PENDING, ACTIVE, REJECTED).

3. Asset Management (The "Yard")

CRUD operations for the heavy machinery listed by the supplier.

Method	Endpoint	Description
POST	/assets	Add a new machine (Type, Brand, Engine Hours, Operator toggle).
GET	/assets	List all machines owned by the authenticated supplier.
GET	/assets/{assetId}	Fetch detailed specs and current status (Available/Rented).
PUT	/assets/{assetId}	Update machine details (e.g., engine hours after maintenance).
DELETE	/assets/{assetId}	Remove a machine from the platform.
POST	/assets/{assetId}/photos	Upload front, side, and serial-number plate images.

4. Operator & Guarantor Management

Handles the 4-step vetting scorecard and links operators to machines.

Method	Endpoint	Description
POST	/operators	Add an operator (Name, License Category E, 3+ years of proof).
GET	/operators	List all operators linked to the supplier's account.
PUT	/operators/{operatorId}	Update operator details.
POST	/assets/{assetId}/operators	Assign a specific operator to a machine.
POST	/operators/{operatorId}/guarantors	Add two verifiable guarantors (Name, Phone, Occupation, ID).
POST	/operators/{operatorId}/vetting	Submit answers to the terrain knowledge assessment.
GET	/operators/{operatorId}/vetting-status	Check if the operator passed the vetting criteria.

5. Pricing & Booking Engine

Handles the request from miners, cost calculation, and supplier approval.

Method	Endpoint	Description
GET	/assets/{assetId}/pricing	Calculates total cost (Rental + Mobilization) based on days & distance.
GET	/bookings	Gets all bookings for the supplier (filterable by status).
GET	/bookings/{bookingId}	Fetch detailed contract info, miner details, and lease period.
PUT	/bookings/{bookingId}/approve	Supplier accepts the miner's request. (Backend triggers escrow validation).
PUT	/bookings/{bookingId}/decline	Supplier declines with a mandatory reason field
GET	/bookings/{bookingId}/contract	Download the digital contract / E-Waybill template.

6. Logistics, Dispatch & Tracking

Manages 3PL assignment, GIT insurance, and real-time tracking.

Method	Endpoint	Description
POST	/bookings/{bookingId}/dispatch	Supplier/System pings the nearest vetted 3PL provider.
GET	/bookings/{bookingId}/logistics-status	Show current haulage stage (Dispatched, En Route, Arrived).
GET	/bookings/{bookingId}/tracking	Retrieve current GPS coordinates from the Electronic Tracking Unit (ETU).
POST	/bookings/{bookingId}/insurance	Manually trigger GIT policy (though the backend usually auto-triggers on dispatch).
GET	/bookings/{bookingId}/insurance-certificate	Download the active GIT + PAR insurance certificate.

7. Site Sign-Off & Payout Milestones (Risk Management)

Critical for releasing the 20%/40%/40% tranches.

Method	Endpoint	Description
POST	/bookings/{bookingId}/site-arrival	Driver/Site Sign-Off. Confirms machine arrived at mining coordinates. Triggers Milestone 1 (20%) payout.
POST	/bookings/{bookingId}/daily-check	Operator logs the Daily Pre-Start Checklist (oil, hydraulics, grease).
GET	/bookings/{bookingId}/milestones	Get status of the 3 milestones (Locked, Pending, or Released).
POST	/bookings/{bookingId}/return-clearance	Completion Sign-Off. Confirms machine is loaded for return transit. Triggers Milestone 3 (40%) payout.
GET	/bookings/{bookingId}/payment-breakdown	Show exact math: Total Escrow, 15% Platform Fee, 85% Owner Share.

8. Disputes & Breakdown Management

Required to pause automated Milestone 2 (Day 5) if something goes wrong.

Method	Endpoint	Description
--------	----------	-------------

POST	/bookings/{bookingId}/disputes	Miner or Supplier raises a dispute (e.g., hydraulic failure).
GET	/bookings/{bookingId}/disputes	List the dispute history for this lease.
GET	/disputes	Get all disputes involving the supplier.

9. Financial Wallet & Withdrawals

How the supplier accesses their earned funds.

Method	Endpoint	Description
GET	/wallet/balance	Show the available balance (released payouts) and the pending balance (locked in escrow).
POST	/wallet/withdrawal	Request a bank transfer from the available wallet balance.
GET	/wallet/transactions	Historical ledger of all pay-ins and payouts.

10. Supplier Dashboard Analytics

Powers the KPI cards and charts.

Method	Endpoint	Description
GET	/dashboard/supplier/stats	Aggregated data: Total machines, Active leases, Current-month earnings, Pending Escrow.
GET	/dashboard/supplier/activity	Time-series data for charts (e.g., earnings over the last 30 days).

11. Admin & Field Agent Verification Panel

Backend endpoints for the internal team to activate accounts.

Method	Endpoint	Description
GET	/admin/suppliers/pending	List all accounts awaiting physical inspection.
PUT	/admin/suppliers/{supplierId}/verify	The field agent confirms the machine physically exists. Sets status to ACTIVE.
PUT	/admin/suppliers/{supplierId}/reject	Reject the supplier with a reason.
GET	/admin/bookings	Global oversight of all active haulage contracts.

12. Webhooks (For Third-Party Integrations)

Not directly called by the frontend but must be built for external APIs.

Method	Endpoint	Description
POST	/webhooks/payment/paystack	Listens for successful escrow locks or settlement confirmations.
POST	/webhooks/insurance/leadway	Listens for GIT policy activation success/failure.
POST	/webhooks/tracking/etu	Ingest real-time GPS coordinates from the physical cargo tracker.
